PROFESSIONAL SUMMARY

Software Engineer with over five years of professional experience designing, building, and deploying full-stack web and mobile applications across the JavaScript and TypeScript ecosystem. Proficient in Node.js, NestJS, Express, Angular, React, Next.js, and React Native, with practical experience in REST API integration, real-time data handling, relational databases, and Dockerized deployments. Comfortable owning features end to end—from planning and documentation through coding, testing, and release—and collaborating closely with teammates to deliver maintainable, scalable systems.

TECHNICAL SKILLS

Backend: Node.js, TypeScript, NestJS, Express.js, REST APIs, SQL / MySQL
Frontend: Angular (RxJS, NgRx), React, Next.js, JavaScript, HTML, CSS
Mobile: React Native
UI / Styling: Tailwind CSS, Angular Material, MUI, Bootstrap
State Management: Redux, RTK Query, NgRx, NGRX Store
Tools & DevOps: Docker, CI/CD, Git / GitHub, Firebase, Socket.IO, Redux Toolkit
AI-Assisted Development: Claude — used as a daily tool for faster prototyping, debugging, and code review

PROFESSIONAL EXPERIENCE

Software Engineer 2021 – Present

Molave Youngs Milling Corp

- Build and maintain web applications with Angular and React, mobile apps with React Native, and backend services with Node.js and NestJS.
- Coordinate a small team of two developers across the full software lifecycle—planning, documentation, coding, testing, and deployment of the company's core software.

Key projects:

Requisition System

Internal procurement app that lets offices submit item requests, generates purchase orders, and lets admins select and award suppliers with dynamic quantities and rates.

Built dynamic table and input components, integrated Socket.IO for real-time updates across client and server, and used MySQL triggers/events to maintain a full before-and-after audit history of changed records.

Role: *Full-Stack Developer (sole developer).*

Human Resource Management System

Web platform that automates payroll computation and generates payroll reports and MBOS files—remittances, loans, taxes, night-shift and overtime differentials—using DTR data from the companion mobile app.

Owned a sub-module that exports CSV files to the NetSuite Oracle system, ran weekly progress reviews with the IT supervisor and department managers, and containerized local development with Docker.

Stack: *Angular, NestJS, Tailwind CSS, TypeScript, Docker.*

Daily Time Record (DTR) Mobile Application

React Native app that records employee time-in and time-out by scanning a QR-coded ID, with on-site photo capture to verify attendance.

Stack: *React Native, NestJS, TypeScript, React Native Paper, Redux.*

Delivery Cargo System

Truck-monitoring system that tracks load status, computes odometer-based incentives, and produces daily, monthly, and annual reports.

Implemented RTK Query for a cleaner, more maintainable front-end data layer and deployed the system in a local Dockerized environment.

Stack: *Next.js, NestJS, TypeScript, MUI, Redux, Docker.*

Milling Tracking System & User Management System

Milling tracker for raw-material and finished-goods flow between the wholesale house and rice mill; centralized user-management system granting single credentials access to multiple systems via admin-assigned routes.

Role: *Full-Stack Developer.*

Software Engineer 2020 – 2021

iPay Bayad Center, Pagadian

- Developed features for iPayPaymentCenter, a publicly deployed bill-payment portal restricted to authorized users such as cashiers.
- Integrated external APIs using secret-key authorization to exchange JSON data reliably between client and server, and designed database and table structures for the web application.
- Built content-management interfaces for clients, performed code maintenance and system upgrades, and established a routine of planned testing to maintain functionality.

Stack: *Angular 12, Tailwind CSS, TypeScript, Node.js, NGRX.*

FREELANCE & CONTRACT PROJECTS

CampConnection — Foreign Client (California, USA)

Full-featured campsite booking platform for church groups and scouting organizations, enabling users to browse, book, and manage campsites across multiple tailored modules.

Led backend development—booking management, user authentication, and real-time data handling via Firebase—and integrated the CLIQ payment API for secure, streamlined transactions.

Stack: *React.js, Firebase, CLIQ Payment API.*

White House Apartment System

Apartment-management app tracking rentals and occupied versus vacant rooms, with SMS notifications for payment and due-date reminders for each tenant.

Built reusable dynamic components and implemented RTK Query for maintainable data structures across the front and back end.

Stack: *Next.js, NestJS, TypeScript, MUI, Redux.*

EDUCATION

Bachelor of Science in Computer Science 2014 – 2019

Western Mindanao State University
